Subject:	Northwest Pipeline Posts Notice

Notice Text:

Subject: Rangely-Vernal Cut Out Deficiency

Notice Text:
As part of Northwest's scheduled maintenance, pipeline recoating between the Vernal and Rangely compressors is currently taking place. During this time an anomaly was discovered and a cutout between the two compressors will be required.

The cutout is scheduled to take place on August 20, 2022. Northwest will not be able to schedule nominations that net greater than 162,000 Dth/d southbound through the Vernal compressor or 155,500 Dth/d northbound through the Rangely compressor. Current nominations for gas day August 12 are approximately 220,686 Dth/d north through Rangely. Northwest will mitigate volumes to the highest extent possible.

If the primary scheduled quantities for gas day August 20

exceed the operationally available capacity of 162,000 Dth/d south through Vernal or 155,500 Dth/d north through Rangely, or what Northwest is unable to mitigate, Northwest will give notice of a Deficiency Period based on the Vernal compressor southbound design capacity of 324,000 Dth/d and the Rangely compressor northbound design capacity of 311,000 Dth/d.

If you have any questions, please call your Commercial Services Representative or the hotline at 713-215-6301.
