Notice End Time: 05:22 PM  
Notice Identifier: 20220453  
Prior Notice Identifier: N/A  
Required Response Indicator: 5  
Response Date: N/A  
Response Time: N/A  
Subject: Kern River - Warning - Low Line Pack Update

-----  
Notice Text:

Line pack continues to be low and threatening the operation of Kern River's system. Shippers and delivery point operators have drafted over 200,000 Dths of line pack in the last 48 hours. All shippers and delivery point operators are required to align daily scheduled nominations with physical receipts and deliveries.

As a reminder, Kern River's scheduled maintenance for the Coalville, Utah pipe replacement is in progress through Monday, September 12, 2022. Estimated capacity at Coyote Creek has been reduced by 47,000 Dths. The estimated operational capacity is 2,191,000 Dths during the maintenance. Kern River will evaluate system conditions and nomination flow patterns each cycle to determine operational capacity levels that maximize throughput.

In addition, Kern River may take corrective action to increase line pack by limiting physical flow at delivery points where a draft imbalance was created during prior gas day(s). All prior arrangements to receive imbalances owed from Kern River are terminated effective immediately.
